

Heritage Treasures Project

Preprocessing Steps

- **1. Preprocessing Steps**

- 1. Data Cleaning**

- Removed null and inconsistent values from date_end, area_hectares, and regions.
 - Excluded invalid entries such as “0”, text values in year fields.
 - Corrected data type mismatches (converted year fields to numeric).

- 2. Data Transformation**

- Converted date_end to numerical year format.
 - Standardized region and state names.
 - Created calculated fields such as:
 - CNT(Name) – Total heritage sites
 - SUM(area_hectares) – Total heritage area
 - Year-wise aggregation for forecasting

- 3. Data Filtering**

- Applied filters to remove null years.
 - Used Top N filter for “Top 10 Regions by Area”.
 - Filtered “Danger Status = In Danger” for extinction analysis.

- 4. Data Aggregation**

- Grouped data by Region, Category, and Year.
 - Aggregated site count and area values for visualization.

Business Questions with Visualization

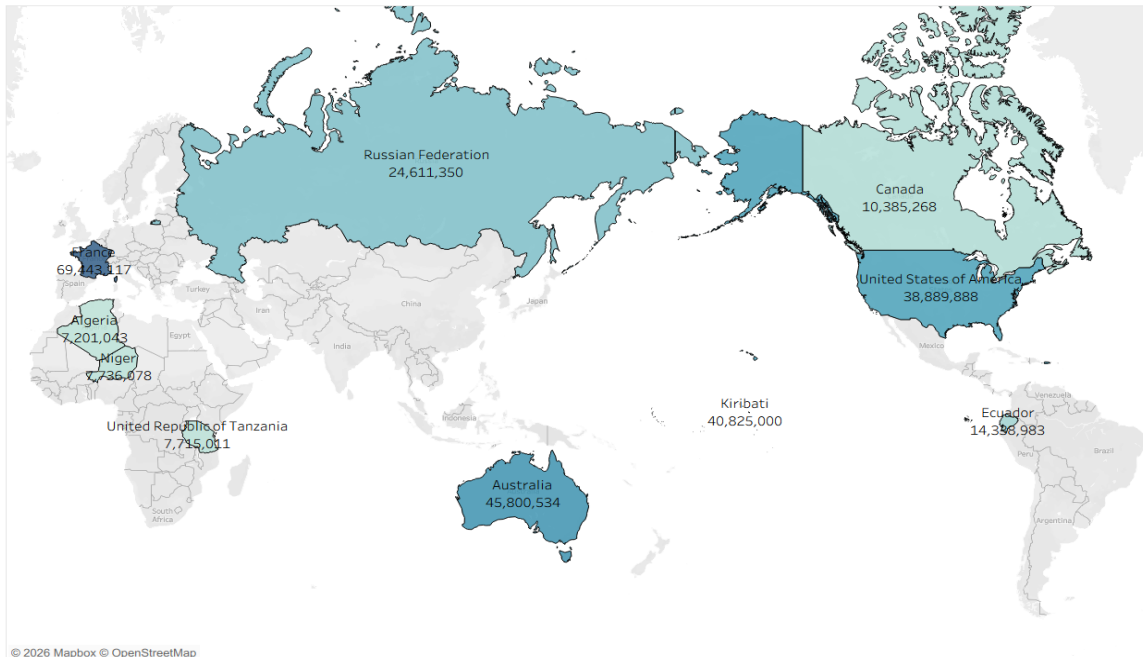

1. Which region has the highest number of countries with UNESCO heritage sites?

Countries per Region

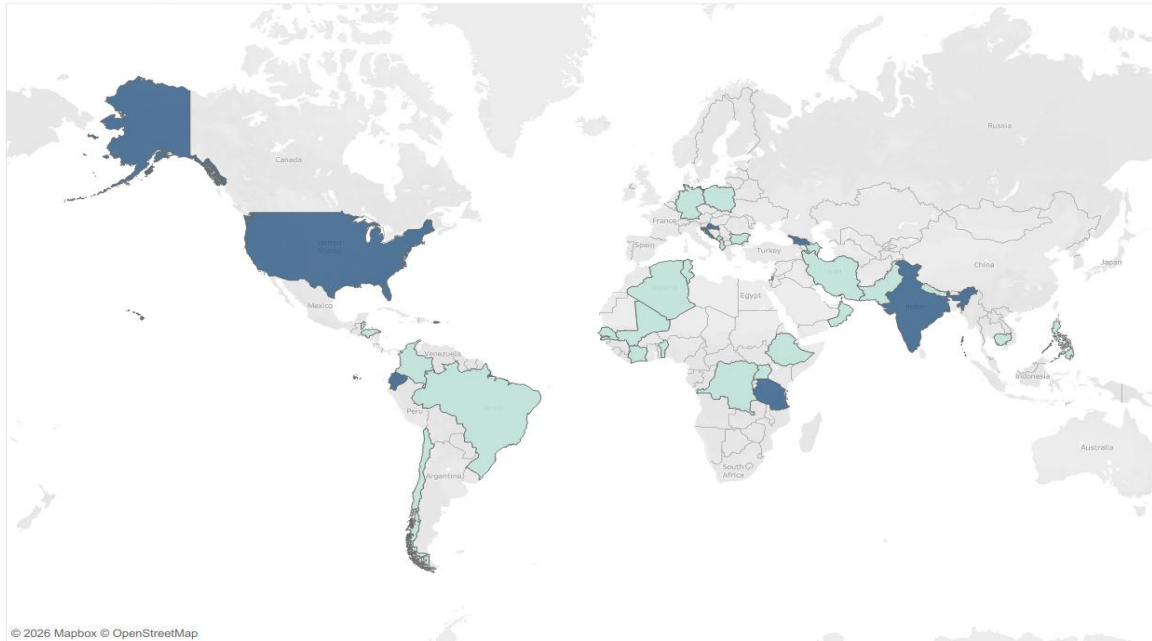

2. Which region has the highest number of countries with UNESCO heritage sites?

Top 10 Countries by Area

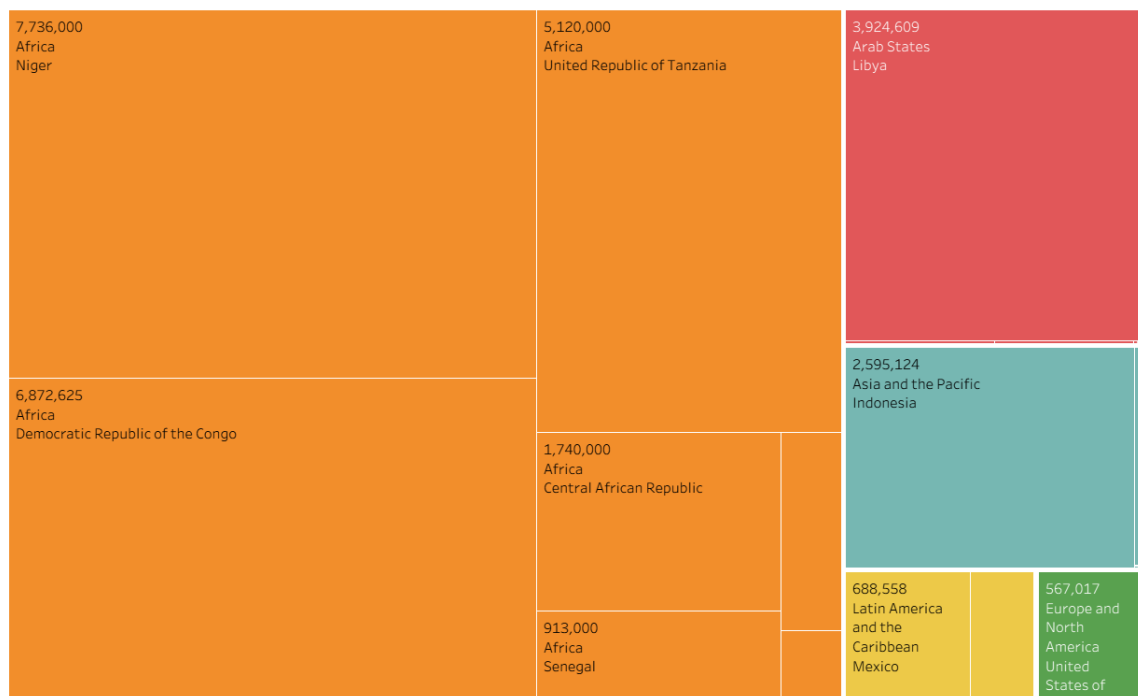

3. Does heritage loss correlate with regional instability or environmental risks?

Regions by Heritage Ended

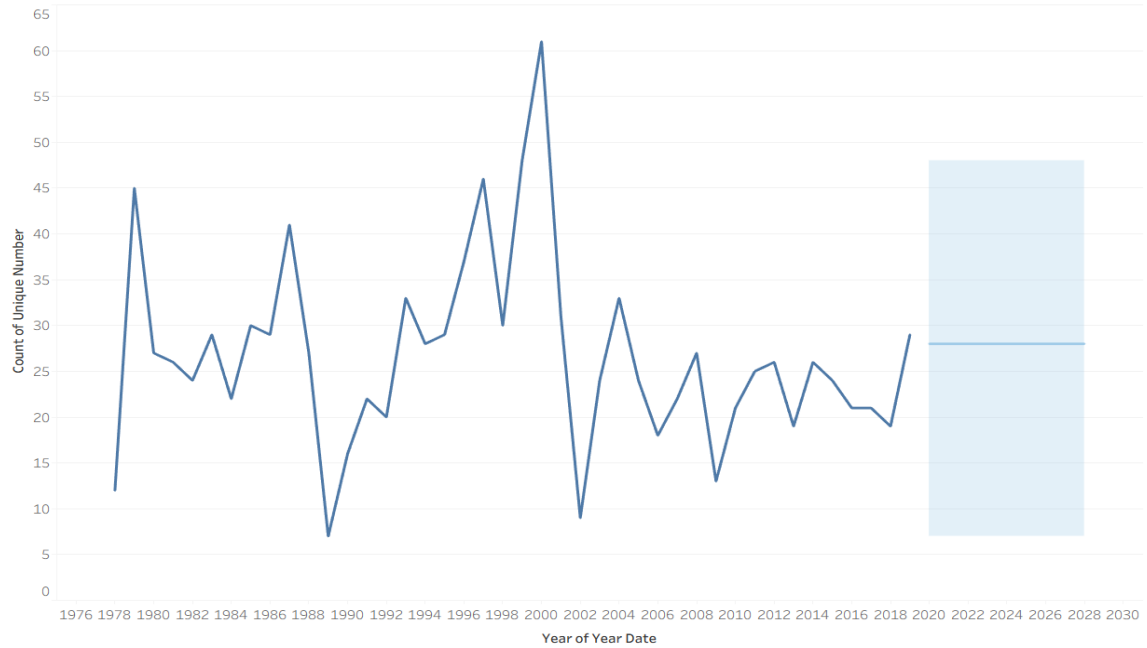

4. Which countries have the highest number of endangered heritage sites?

Top 10 Danger Sites

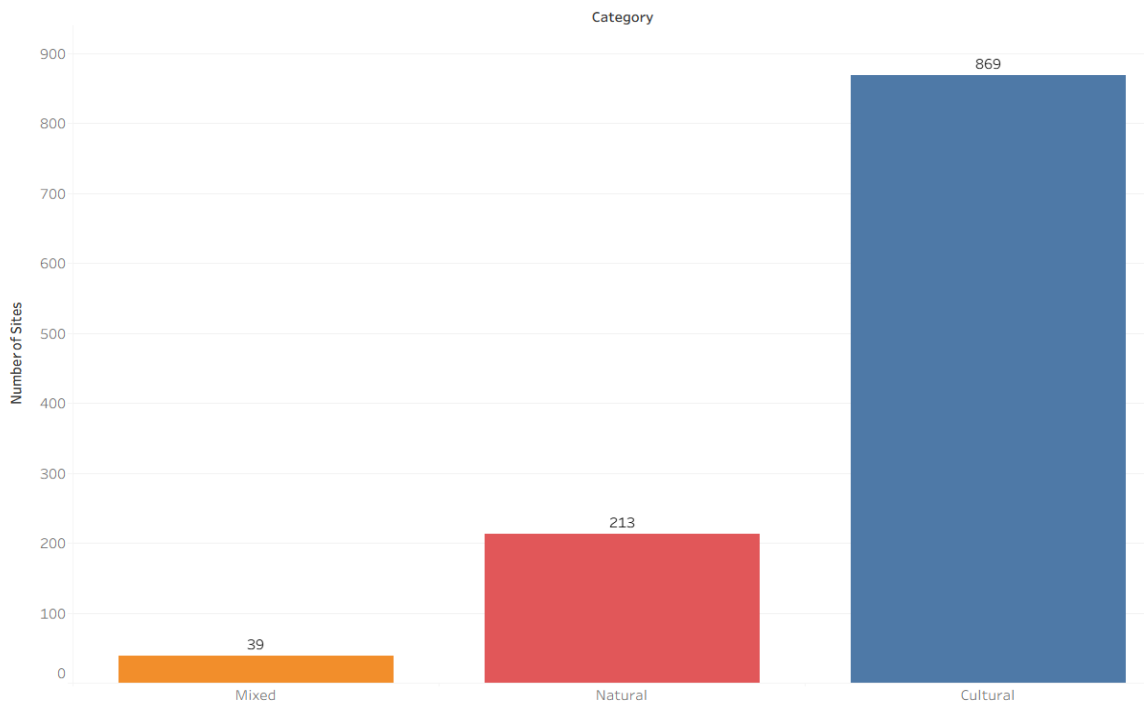

5. Will the number of heritage sites increase or decline in the coming years?

Year Forecasting of Heritages

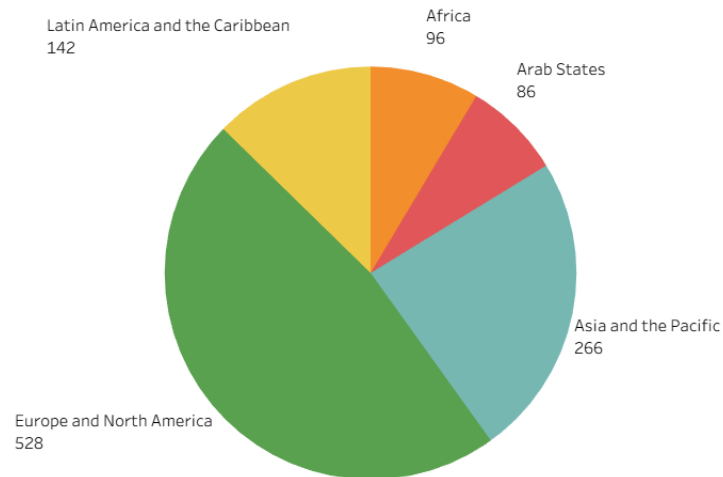

6. Are natural heritage sites growing at the same rate as cultural ones?

Categories by Sites Count

7. How evenly are heritage sites distributed globally?

Site Count per Region

8. Which regions have large heritage areas but high danger classification?

Analysis of Danger Sites and Area of Heritages
